National Cybersecurity Awareness Month 2022

10 Ways to See Yourself in Cyber

Use Strong Passwords

Use long and complex passwords that do not contain personal information

Think Before You Click

Do not click on links from sources that you do not recognize or trust.

Keep Devices Updated

Keep devices and apps up-to-date. Software updates may include critical security fixes.

Stay Safe on Social Media

Beware of what you share online. Posts can last forever.

See yourself sharing these cyber tips with your family and friends!

Be Cautious of Public Wi-Fi

Nothing on public Wi-Fi is private. Avoid online banking or transactions when connected.

Avoid Phishing Attacks

Don't engage with unsolicited emails asking for personal information. Call your bank to verify anything suspicious.
Nothing is "Free" Online

Just because it says it's free, doesn't mean it won't cost you your personal data such as: name, age location, purchasing habits, and browsing history.

Use Two-Factor Authentication

Using an authenticator app, like Google Authenticator, you can protect yourself even in the event someone finds out your password to prevent unwanted logins.

Smart Home Devices

While convenient, smart home devices are usually not secure. Be sure your home router has a strong password to avoid

Be Aware of Social Engineering

Unsolicited messages on social media are typically looking to build a relationship with the goal of stealing money and personal information.

Typically they will ask for a gift card as a form of payment or a need for a wire transfer of money in the hopes that you would receive more in return.
